

FUND OBJECTIVE & STRATEGY

The ClucasGray Equity Prescient Fund is a SA only, general equity fund. The Fund aims to provide long term capital growth ahead of its benchmark (FTSE/JSE Capped All Share Index) and the competing unit trust category by investing in any shares that are listed on the JSE. The Fund is a high conviction fund aiming to hold no more than 25 stocks at any one time. Fundamental analysis, a valuation discipline and a belief that inefficient markets create opportunities in mispriced assets underpin our process.

FUND INFORMATION

Portfolio Managers:	Andrew Vincent & Grant Morris
Inception Date:	01 October 2011
Fund Size:	R2061.9 million
Unit Price:	369.32 cents
ASISA Category:	Equity SA General
Benchmark:	FTSE/JSE Capped All Share Index (J303)
Min Lump Sum:	R10 000
Min Monthly Investment:	R1 000
Issue Date:	11 May 2026
ISIN:	ZAE000160693

WHO SHOULD INVEST

The Fund is suitable for long-term investors seeking high levels of investment growth who can tolerate the associated levels of capital volatility.

RISK INDICATOR

Generally, these portfolios hold more equity exposure than any other risk profiled portfolio therefore tend to carry higher volatility. Expected potential long-term returns could be higher than other risk profiles, in turn potential losses of capital could be higher.

QUARTERLY COMMENTARY | MARCH 2026

The 1st quarter of 2026 was a particularly eventful one. Following a strong performance in the months of January and February, the start of the US & Israeli war with Iran at the end of February derailed the quarter somewhat. Notwithstanding the fund retracing over 6% in March, it gained over 3% in the quarter. This compares to the JSE Capped All Share Index declining by 0.5% and the peer group declining by 1%.

A number of portfolio holdings benefited the relative performance of the fund. The most notable of these were Sasol (+112% in the quarter), Glencore (+40%), Exxaro (+26%) and AECI (+29%) all benefited from disruptions to the broader energy and chemicals markets in the wake of the Iran conflict. In addition, Anheuser, MTN and African Rainbow Minerals all gained more than 10% in the quarter.

Countering these, some portfolio holdings saw their share prices decline over the quarter - these include Pick 'n Pay, Nampak, Foschini and Naspers which all declined more than 15%; Old Mutual, Momentum and Impala were all down over 5%.

Given the extent of relative movements we were fairly active in the quarter. We introduced two new additions to the portfolio, namely Truworths and Nedbank. In addition, we added to existing holdings in Foschini, Life Healthcare, The Kal Group, Pick 'n Pay, Naspers and Reinet. The purchases were principally funded by the buy out and delisting of Metrofile in January, a material distribution of capital by Ethos Capital. We also took advantage of relative strength to reduce positions in Absa, FirstRand, Exxaro, Sasol, AECI, Sabvest and MTN.

Our thesis heading into 2026 was that the operating environment in South Africa for many companies was getting incrementally better - lower inflation expectations, lower interest rates, lower cost of capital, and improving fixed capital investment spending were some of the factors that we believe would lead to an improvement in economic growth, and ultimately company earnings. The relative performance of local markets in January and February seemed to suggest that this thesis was gaining some traction.

The situation around the Iran War has been fluid and unsettling - the Straits of Hormuz are a critical choke point for world oil, and numerous other related products. Any prolonged disruption to supply can have significant adverse implications for the global consumer economy. We, like most of the readers, have no greater insight into how the conflict escalates, or whether it deescalates materially. Daily headlines have not proven helpful, and a "war by X (or Truth Social)" has led to March and April being particularly volatile months on the investment markets.

Previous crises have proved to be a good opportunity to take advantage of dislocations in prices. Whilst there remains some doubt as to how this crisis develops, and the longer term impact it will have on energy prices and ultimately economic growth, a number of companies have seen their valuation metrics retrace considerably.

In our portfolio management experience, we have over the decades learnt the difficulty of trying to make sense of these imponderable macro events. The ClucasGray Asset Management investment process is designed to assess prospective returns for all companies and asset classes. With the recent pull back in many company share prices, and the resultant valuation metrics on which many now trade, we believe the opportunities being presented to patient investors are appealing.

DISCLAIMER

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used.

The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year.

Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

Where a current yield has been included for Funds that derive its income primarily from interest bearing income, the yield is a weighted average yield of all underlying interest bearing instruments as at the last day of the month. This yield is subject to change as market rates and underlying investments change.

The Manager retains full legal responsibility for any third-party-named portfolio. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. A list of fund specific risks is provided below. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 13:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut off time Prescient shall not be obliged to transact at the net asset value price as agreed to. Funds are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.

Max Gain: Largest increase in any single month.

Max Drawdown: The maximum peak to trough loss suffered by the Fund since inception.

% Positive Months: The percentage of months since inception where the Fund has delivered positive returns.

PE Ratio: The weighted average price earnings ratio of all the underlying equity in the Fund. The price earnings ratio of each company is the price divided by the earnings per share.

Dividend Yield: The weighted average dividend yield of all of the underlying equity in the Fund. The dividend yield of each company is the dividends per share divided by the price.

Equity investment risk: Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

Property risk: Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

Currency exchange risk: Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.

Geographic / Sector risk: For investments primarily concentrated in specific countries, geographical regions and/or industry sectors, their resulting value may decrease whilst portfolios more broadly invested might grow.

Foreign Investment risk: Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.

Developing Market (excluding SA) risk: Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.
